

# Posterior MAP vs truth (healthy subset), local hardening scenario

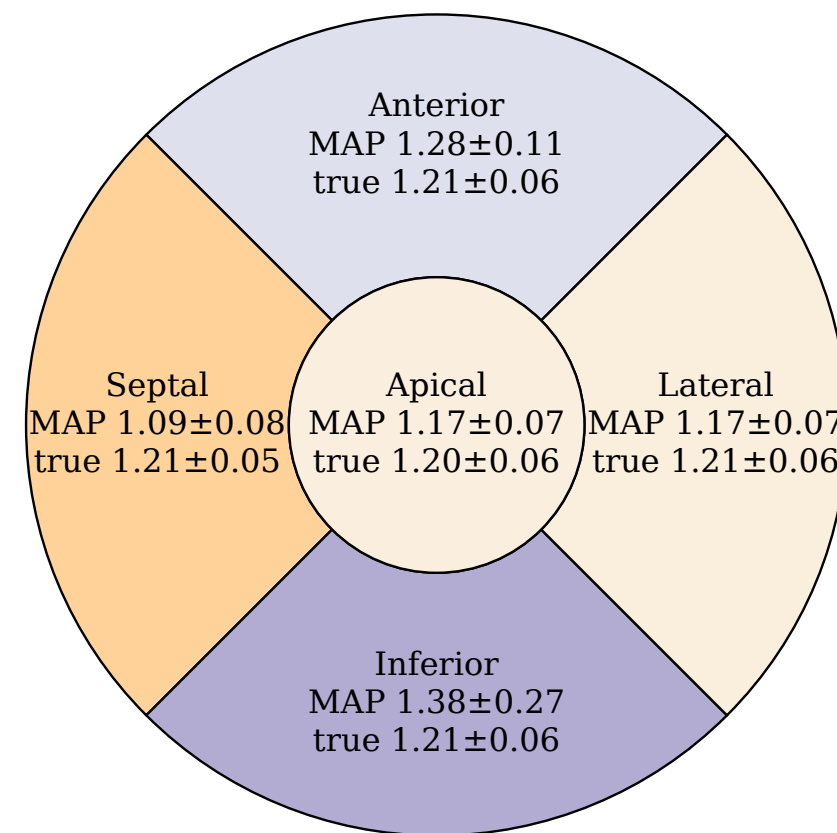

MI Mild ( $\mu=1.5$ )

MI Moderate ( $\mu=2.0$ )

MI Severe ( $\mu=3.0$ )

Mean relative bias  $\frac{(\text{MAP} - \text{truth})}{\text{truth}}$

**b-parameters ( $C_{b,r}$ )**

Healthy subset: region  $r$  uses the 80 samples where target  $\neq r$  ( $r$  at baseline,  $\mu = 1$ ). Numbers = cross-sample mean  $\pm$  SD; CRPS reported as mean and variance.
