

Posterior MAP vs truth (diseased subset), local hardening scenario

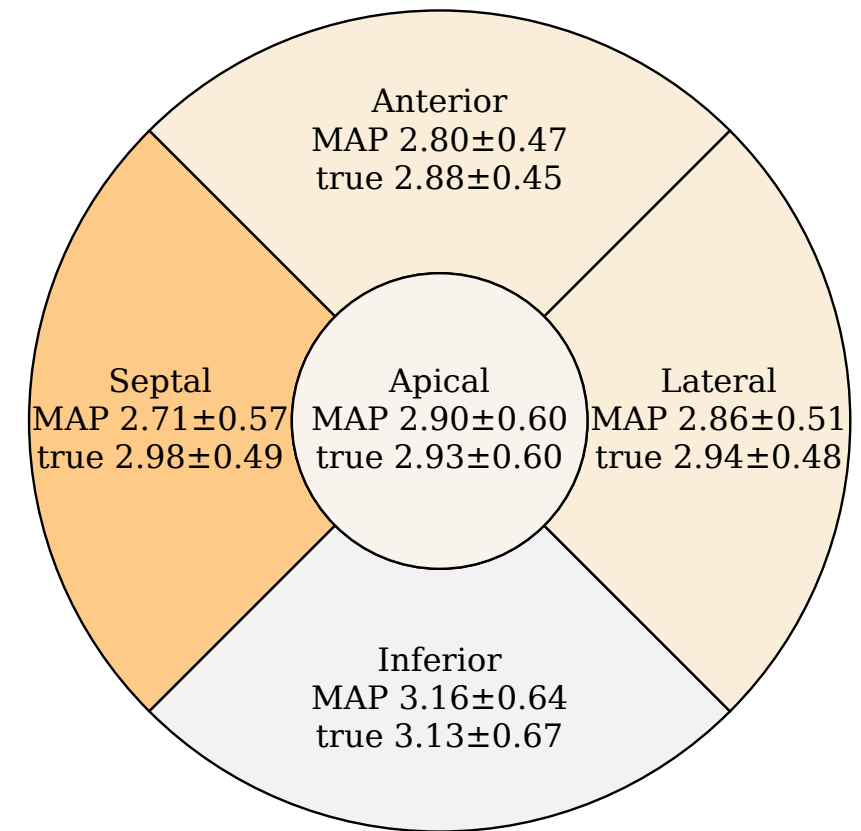

MI Mild ($\mu=1.5$)

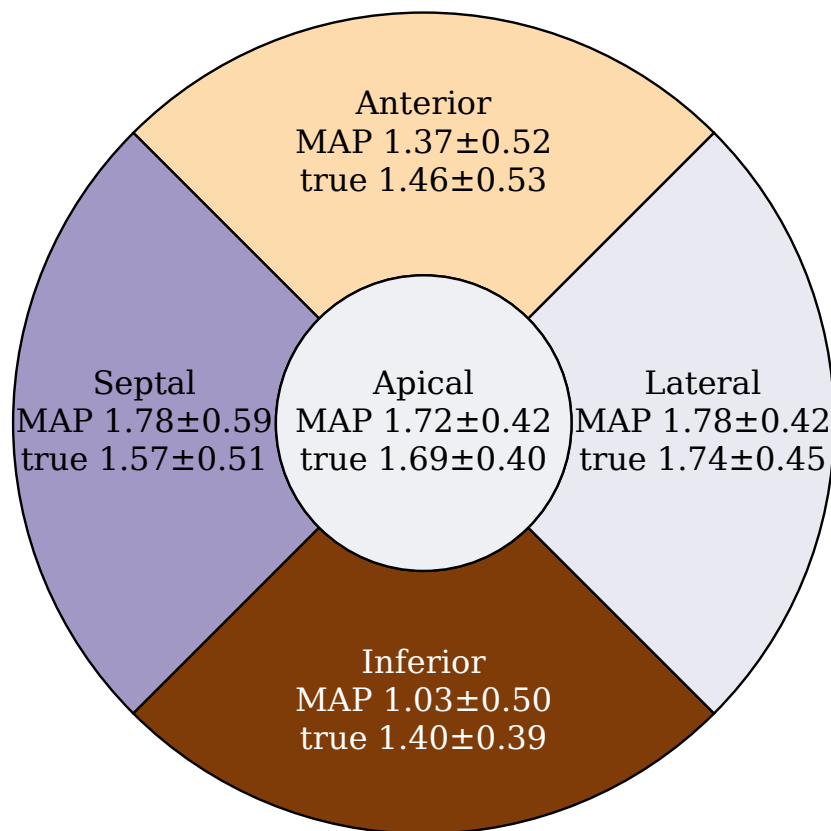

MI Moderate ($\mu=2.0$)

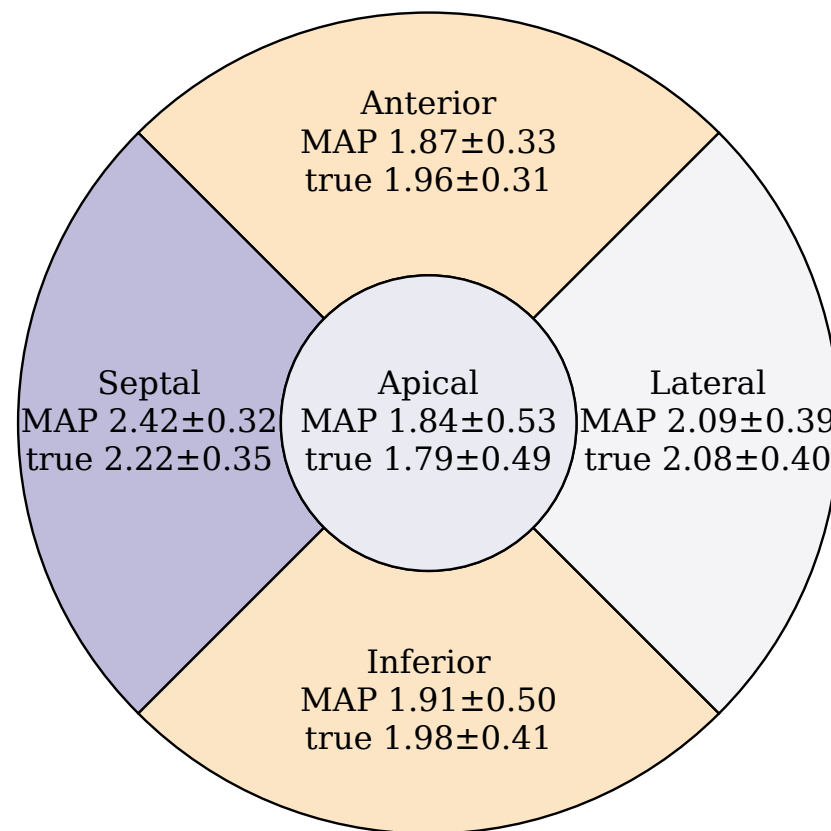

MI Severe ($\mu=3.0$)

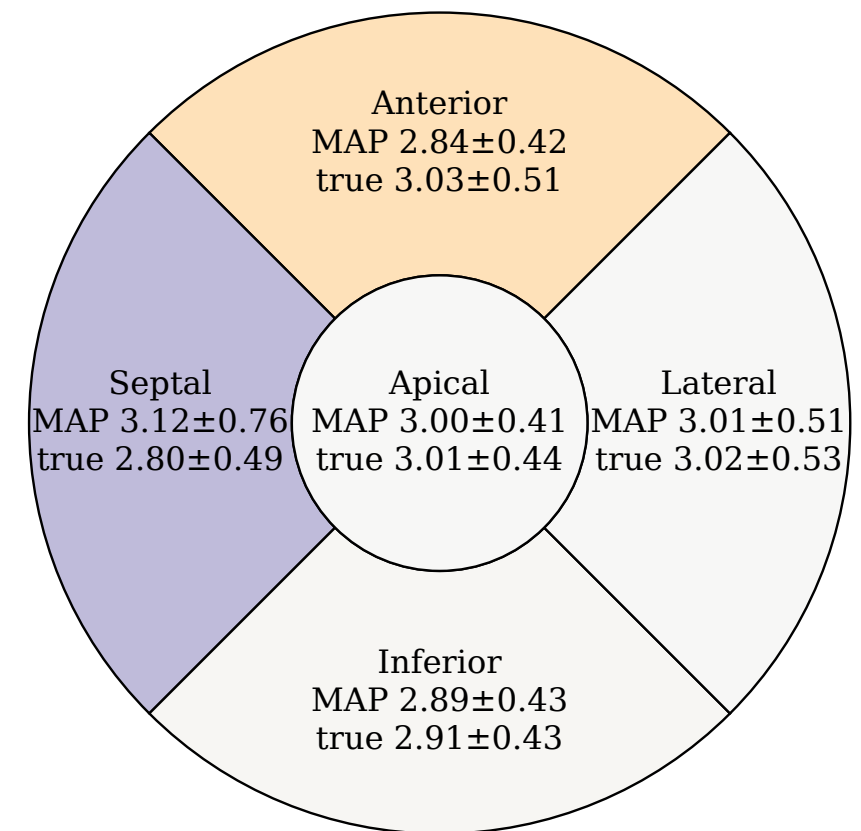

MI Mild ($\mu=1.5$)

MI Moderate ($\mu=2.0$)

MI Severe ($\mu=3.0$)

Mean relative bias $\frac{MAP - truth}{truth}$

Diseased subset: region r uses the 20 samples where $target == r$. Numbers = cross-sample mean $\pm$ SD; CRPS reported as mean and variance.
